

Tree Information Sheet

Common Name

Tuart

Botanical Name

Eucalyptus gomphocephala

Origin

Native to south west Western Australia.

Description

Elegant medium to large evergreen tree with a fairly dense canopy. Within a streetscape environment the tree will generally be smaller and can grow up to 15 metres high.

The tree has rough, greyish, box-like bark that extends the length of the trunk to small twigs. Showy white feather-like flowers appear in mid-summer to mid autumn. Mature trees provide habitats for many native fauna.
