

Lysander Park (Heathridge) Pump Track

The proposed facility includes a pump track designed to cater for entry level BMX users. The design will incorporate a loop circuit and asphalt track with a range of rolling humps (rollers) that, when ridden with a pumping action, does not require pedalling.

The design may also incorporate complementary infrastructure including seating, accessible path and a picnic setting, (budget dependent). The design will be seamlessly integrated into the existing landscape ensuring that all trees are retained.
